

MASTER IN EFFICIENCY AND ENERGY USE

Labour world adapted training
72 Credits ECTS

International character

Possibility of double degree

Access to the doctorate

The master covers the different forms of generation, storage, distribution and consumption of all type of energies, especially the renewable energies and new forms of use and optimization, that pursues the European and international guidelines collected in the "Kyoto Protocol" and "Climate Summit of Paris 2015".

Objective

Form professionals in energetic efficiency (Directive 2012/27/EU of the European Parliament, transposed in Spain into of R.D. 56/2016) and facilitate the access to the professional activity of "energy auditor", as Article 8 of the R.D. 56/2016.

Allows:

Access to doctorate studies, specialization in the efficiency and optimization of consumptions, transport, and generation of all type of energy investigation.

Reach a double international degree by the agreement with the Polytechnical Institute of Braganza in Portugal.
